Why wont my kangertech evod charge

I bought a spare Evod ego battery to go with my vap pen starter kit But the Evod battery doesn't seem to be charging right, and runs out of battery life after about 20 hits. The battery that came with my kit works just fine and lasts all day. I was wondering if maybe the charger I'm using isn't real good for charging the Evod battery, or just a bad battery? I bought the Evod battery brand new at vap shop. Pictures below of the charger and batteries I bought a spare Evod ego battery to go with my vap pen starter kit But the Evod battery doesn't seem to be charging right, and runs out of battery life after about 20 hits. The battery that came with my kit works just fine and lasts all day. I was wondering if maybe the charger I'm using isn't real good for charging the Evod battery, or just a bad battery? I bought the Evod battery brand new at vap shop. Pictures below of the charger and batteries I'm assuming the battery marked 'CrissCross' is the new battery. It looks to be a smaller battery with less Mah. Did the shop tell you the Mah on it? If it's only 600Mah it isn't going to last very long at all... maybe half a day if your a frequent vaper. If you want more life... look into the Evod Mega, Vision Spinner II, eLeaf iStick, Ego One, Kanger Subvod ... All of these would be a nice step up from the standard 600Mah Ego. Also... try taking an alcohol wipe and cleaning the 510 connection before you try to charge it again. If that don't work... you could simply have a dud and need to ask the shop to replace it. I'm assuming the battery marked 'CrissCross' is the new battery. It looks to be a smaller battery with less Mah. Did the shop tell you the Mah on it? If it's only 600Mah it isn't going to last very long at all... maybe half a day if your a frequent vaper. If you want more life... look into the Evod Mega, Vision Spinner II, eLeaf iStick, Ego One, Kanger Subvod ... All of these would be a nice step up from the standard 600Mah Ego. The Evod is the new battery and the one giving me problems, and is bigger the Criss Cross battery but lasts way less when being used. The Criss Cross battery I think is 600Mah or 650Mah, the Evod looks like it could be 1000Mah from its size. Also I ordered a Joytechh AIO, waiting on that to be delivered, I needed a upgrade over the vap pen. Not enough smoke or a hit for me with vap pen, I have to hit slow and slowly pull the vapor into my mouth for a MTL hit. Last edited by a moderator: Apr 26, 2016

Also... try taking an alcohol wipe and cleaning the 510 connection before you try to charge it again. If that don't work... you could simply have a dud and need to ask the shop to replace it. I take a Qtip and clean the flat connection inside when I charge the batteries but will clean the threads too. If that don't work I'll take the Evod battery back to the store Thanks for your help. Last edited by a moderator: Apr 26, 2016 @Countrypami could it be the clearmizers I'm using are killing the battery of the Evod battery? As long as you are staying within the recommended ohms, I don't think so. Anything between 1.5-3.0 should work just find on an Evod. Volunteer to help with beta testing! We're working on getting the site updates ready, but we'll need your help to check the changes, make sure everything makes sense to you, and report any issues you see. View thread Make sure it is turned on: If you are having issues charging your ego or evod battery, the first thing you want to do is make sure it is turned on. To do this press the power button 5 times in a row. You will want to press the button 5 times rapidly, in a rhythmic flow. How do I fix my eVod battery? Starts here: 3:31 Kangertech Evod battery maintenance - YouTube YouTube Start of suggested clipEnd of suggested clip56 second suggested clipYou can take your tank. Put it back on and it should be making contact with your atomizer. There and More You can take your tank. Put it back on and it should be making contact with your atomizer. There and it should vape. Now the way this actually works inside of this. How do you know if your eVod is charging? How to charge? The battery will flash 3 times and turn off when attached to the charger. When the battery is fully charged, the LED on the USB charger will turn from red to green. How long do eVod batteries last? The eVod battery is one of our most popular models! This 1,000mAh battery will usually last up to eight hours and the convenient USB charger allows you to charge your e-cigarette nearly anywhere! The eVod is easy-to-use, reliable and the perfect e-cigarette for anyone! How do you charge a EVOD twist vape pen? Starts here: 1:31 Kanger EVOD Joyetech eGo TC Twist CC Ago Battery Replacement USB ... YouTube How do I start my EVOD vape pen? To turn your EVOD on, push the button five times. The LED light on the button will flash three times, indicating that it has been turned on. You can turn it back off again by pushing the button 5 times, and this will keep it from accidentally activating in your pocket or your purse. Are EVOD batteries rechargeable? The Kanger EVOD 650mAh Battery Rechargeable Battery mod is a pen-style battery, offering an integrated 650mAh rechargeable battery, single button layout design, and a constant voltage output of 3.7V directed to a threaded eGo-style connection point. Are EVOD batteries good? The SteamCloud EVOD Battery is a strong, truly versatile battery that employs cutting edge functionality. You can conveniently use the EVOD with each of the vape choices available today - 510 oil vape tanks, wax atomizers, and dry herb heating chambers. How long does it take to charge a EVOD twist? Once the battery is drained it can be recharged with an eGo USB charger with a 0.5-1.0A wall adapter, a full charge will normally take 3-4 hours. What is the capacity of the kangertech evod battery? The Kangertech EVOD Battery has a total capacity of 1100mAh which allows for longer use between each charge. The battery has an output of 3.7V and is specially designed for optimization with the atomizer coil. This allows for smooth, satisfying hits every time it is used. What kind of battery does the evod tank use? The EVOD Tank can be powered by a brand new, innovative EVOD Battery. Each shell of the battery is specially designed with a strengthened aluminum alloy, ensuring it is durable but also lightweight. How do I Clean my evod device? Reattach your base onto your tank by simply screwing it back on using a clockwise manner. Now simply attach your tank to your battery and begin using. It is important that you clean your EVOD device on a regular basis, especially when you change e-juice flavors. Due to the clearomizer model, cleaning your device is both fast and simple. How do I turn the evod vaporizer on and off? For first time users, one of the more confusing parts of using a vaporizer is usually turning it on. The EVOD Vaporizer is turned on or off but pressing the silver button located on the battery 5 consecutive times. You then hold the silver button again to start the vaporization process. Common Vape Problems We all know how frustrating it is when something goes wrong with our e-cigarettes/ vape pens, but it is completely normal to have problems come up once in a while when vaping. Most of these vape problems can be fixed with some simple troubleshooting steps. The following are some of the most common vape problems you may face with your ego-l, ego-c, twist, evod and many other vape pens. If you need a quick fix while you're issue gets resolved check out our super cheap Nikola Delorean Pod Kit Ego Battery Not Charging The ego & evod battery charging issue is probably the most common vape problems you may come across while vaping. Here is what to do when your ego battery isn't charging. Make sure it is turned on. If you are having issues charging your ego or evod battery, the first thing you want to do is make sure it is turned on. To do this press the power button 5 times in a row. You will want to press the button 5 times rapidly, in a rhythmic flow. Charging Lights: If the charger is showing a red light this means it is the process of charging fair ego battery. If the charger light is green this means your ego battery is fully charged. eGo Battery on/off Other reasons why your eGo battery is not charging Firing Pin has ejuice on it Firing Pin is stuck Firing Pin is not making contact with the charger Charger could possibly be faulty Ego could possibly be faulty Ego Not producing Vapor Ego not producing vapor Another really common vape problem people report on ego and evod vape pens is the issue of their vape pen not producing any vapor. If your eGo batteries is fully charged and the lights are one, but it is not producing vapor, you may have a firing pin issue. It is very common for the center firing pin to get pushed down, which causes it to loose contact with the atomizer. To remedy the situation you need to pop the firing pin back out. You could do this with a small screwdriver by adding slight pressure to push back up. You do n't want to put too much pressure as this can completely dislodge the firing pin and ruin the ego battery. How to Release the Firing Pin Video Here's a nice little video someone made to show how to pull the center pin to fix a non firing ego battery You also don't want to screw the clearomizer on too tightly as this can push the firing pin down. You do want it tight enough to make a connection to the battery however. The firing pin issue is the most common reason why your vape pen is not producing vapor, but there are many other reasons, such as: Clearomizer is low on e juice Ejuice is on the firing pin Moisture is on the firing pin Your vape pen isn't charged enough You need to clean your clearomizer/atomizer You need a new atomizer head Vape Pen giving Burnt taste Your ego-l, ego-c, or evod may be putting off a burnt taste. This, along with charging issues, is the most common vaping problems (also the most annoying). If your vape pen is giving you a horrible burnt taste, you can do a few things to prevent it. Here are some common reasons why your vape pen may be giving you a burnt taste: You need a replacement atomizer head You need to clean your atomizer head You vape too soon after filling a new tank Variable voltage vape pen is set too high The most common solution is to simply continually clean your atomizer heads within your tank and to replace your atomizer head when cleaning doesn't help anymore. Also, if your ego-c twist is giving you a burnt taste, just turn down the voltage. Clearomizer is Leaking It is also a very common problem for people to report a leaking clearomizer tank. It is no fun to have ejuice leak all over you vape pen, but it does happen. That is the nature of vaping. There are some things you can do to prevent the leaking issue. Here are some common causes for a leaking vape pen: Overfilled Tank: if you overfill your clearomizer tank, this can cause it to leak. Ejuice in Air Hole: Most vapers know that gurgling sound they get when vaping. This means you likely have e juice down the center air hole. You can get ejuice in the air hole from a few different ways. From Filling: One way E juice can get an air hole is when you are filling the clearomizer tank, if you pour too much too quickly, it can spill into the air hole. To fill the clearomizer tank correctly, you must make sure you pour slowly and against the edge of the tank. Heavy Draws: Another way you can get e juice down the air hole is from taking too strong of a draw. This can force e juice between the rubber washers. Hot Environment: Another common way that you e juice down the center air hole this from leaving it in the hot car. Left in a Hot car: if you have your vape pen in a hot environment, it can cause you e juice to leak. The reason is because things expand in heat, and your washers that used to keep the ejuice confined in the tank now become too big and let ejuice fall through the cracks. One of the best ways to remedy the fix a leaking clearomizer tank is to clean your tank often. This is essentially starting fresh so you can take the preventative measures to stop your vape pen from leaking. Damaged Clearomizer If your clearomizer is still leaking from the bottom or top, you can almost always remedy this by following the above troubleshooting steps. However, if your clearomizer is still leaking after all the above troubleshooting steps have been carried out, you may have a damaged clearomizer tank. For instance, if your e juice is leaking from the sides of the clearomizer tank (where the glass meets the metal), you may have screwed the clearomizer on too tightly, which caused a crack or a separation from the metal base. At this point you would just need a new clearomizer. Check out our Aspire ET-S 3ml Clearomizer Gurgling Clearomizer Tank This is just a sign that the clearomizer is leaking e juice in the center air hole. This can be caused from overfilling your clearomizer or from taking puffs that are too strong. Try to take slow and steady draws and be careful when filling. E Juice in Mouth This, like the gurgling issue is a common vaping problem. It is caused from taking too strong of draws from your vape pen. Try to take slow and steady draws. Vaping Dehydration A very small percentage of people are sensitive to PG, which is an ingredient in ejuice. Most ejuice blends are 50% PG and 50% VG. For people that are sensitive to PG, it can cause dry mouth or dry eyes while vaping. This is simply referred to as vaping dehydration. To fix this, you can usually drink more water or switch to a VG e Juice. If you're ready for a new vape, check out the super affordable Ego Twist Starter Kit
