Usmle step 1 practice test score predictor

Answer questions and review cases on these topics and more. Antiarrhythmic drugs Aortic regurgitation radiology Inferior wall MI bradycardia Premature ventricular contractions STEMI ECG Below are sample questions you can expect to see in this quiz. A 92-year-old male with hypertension and gout presents to the emergency department with an episode of passing out while sitting at the table. He has felt generally weak for the past 4 days. He denies any chest pains, shortness of breath or other complaints. His medications include metoprolol and celecoxib. His blood pressure is 115/65 mm Hg, heart rate 42 bpm, respirations 12 breaths per minute and he is afebrile. His physical examination reveals normal lung sounds; a regular, bradycardic rhythm with varying intensities of the S1 heart sound; and intermittent large intermittent cannon A waves in the jugular venous pulsations. His laboratory studies are normal. His ECG is below. What is the appropriate treatment? A 45-year-old male with a history of hypertension and dyslipidemia presents to the emergency department with substernal chest pressure for 1 hour. The pain occurred at rest, is 10/10 in severity and is associated with shortness of breath. His temperature is 37.1 C, blood pressure 80/50 mm Hg, heart rate 90 bpm and respirations 20 breaths per minute. His laboratory studies are normal. His ECG is below. What is the appropriate initial management? A 56-year-old male presents to the emergency department with chest pain, nausea and vomiting. His temperature is 37.2, blood pressure 110/70 mm Hg, heart rate 50 bpm, respirations 20 breaths per minute and oxygen saturation normal on room air. Physical examination reveals normal breath sounds, an S4 heart sound and a regularly irregular rhythm. Laboratory studies reveal an elevated troponin I level and appropriate therapy for acute coronary syndrome is started. His ECG is below. What is the treatment for his heart rhythm? Whether you're studying for the boards or just want to stay sharp, Learn the Heart has the tools you need to challenge your cardiology IQ. In Study Mode, see the answer and detailed explanation immediately after you answer a question. In Test Mode, see all answers and explanations after a quiz is complete. Track your performance and progress over time. Identify topics that require more study or challenge your best scores. Score: 0% Rank: Correct Answer: Rationale: Medical students have few validated predictors of USMLE performance. We hypothesized that USMLE-Rx Step 1 Qmax could predict USMLE Step 1 performance. Predictive Capability of USMLE-Rx Methods: In this prospective cohort study, 97 U.S. medical students who used USMLE-Rx Step 1 Qmax for USMLE preparation completed baseline questionnaires regarding their undergraduate GPA along with their performance on USMLE-Rx and the Medical College Admissions Test (MCAT). All questionnaires were completed within one week of participants taking their Step 1 examination. Participants subsequently reported their 3-digit USMLE Step 1 scores when they became available. Spearman's rho and single linear regression modeling were used to assess associations between variables. Results: Qmax survey respondents answered an average of 1075 questions (min 20, max 4030) and answered 66% correctly (min 16%, max 94%). The above graph pictures a scatter plot of USMLE scores by the percentage of correct answers. The 95% Confidence Interval represents the confidence in the underlying true average USMLE score for each value of Percentage of Correct Answers. The 85% Tolerance Interval indicates that there is a 95% certainty that 85% of future values would fall in this interval. Conclusions: After adjusting for known predictors of the USMLE Step 1 score (MCAT score and undergraduate GPA), the Qmax Percentage of Correct Answers was a significant independent predictor, p
